## **A WONDERFUL JULY TOUR AND SEMINAR ON:**

- **SOLAR ELECTRICITY**
- **SOLAR HOT WATER**
- **ACTIVE & PASSIVE SOLAR HEATING.**

***Sponsored by PACE***

“Distributed generation at many locations around the grid increases power reliability and quality while reducing the strain on the electricity transmission system. It also makes our electricity infrastructure less vulnerable to terrorist attack, both by distributing the generation and diversifying the generation fuels. **So if you’re engaged in this effort, it is my view that you are also engaged in our national effort to fight terrorism.**”

– David Garman, Assistant Secretary of Energy, 10/2/01
